

My Fantasy World — Starter Pack (Delete Old Project Safely)

This folder is your **portable kit**.

After you copy what you need into a **new Unity URP project**, you can delete D:\Unity\My_World_Game.

Location: Downloads\MyFantasyWorld_StarterPack\

Folder map

```
MyFantasyWorld_StarterPack/
  README.md                      ← you are here
  Docs/
    FROM_SCRATCH_WORLD_BUILDING_GUIDE.md
    FROM_SCRATCH_WORLD_BUILDING_GUIDE.pdf
    HOW_TO_USE_SCRIPTS.md
    ASSETS_INCLUDED_AND_DOWNLOAD.md
  Scripts/                       ← professional C# (import these)
    Core/
    Player/
    Interaction/
    Buildings/
    Vehicles/
    World/
  AssetsToImport/                ← art/tools copied from old project
  HowToImport/
    IMPORT_ORDER.txt
```

1) Create a new Unity project first

1. Install **Unity Hub** + **Unity 6**
2. **New project** → **Universal 3D (URP)**
Name example: MyFantasyWorld
3. Open the empty project and wait until it finishes importing

Full click-by-click world guide: Docs/FROM_SCRATCH_WORLD_BUILDING_GUIDE.md

2) Import scripts

1. In your new project, create folder: Assets/MyWorld/Scripts
2. Copy everything from this pack's Scripts/ into that folder
(keep subfolders: Core, Player, Interaction, Buildings, Vehicles, World)
3. Wait for Unity compile (bottom-right spinner)

4. If errors mention `linearVelocity`, you are on an older Unity — use Unity 6

Detailed script setup: [Docs/HOW_TO_USE_SCRIPTS.md](#)

3) Import art assets

1. Copy folders from `AssetsToImport/` into your new project `Assets/`
(you can copy one pack at a time to avoid long freezes)
2. Follow `HowToImport/IMPORT_ORDER.txt`
3. Fix pink materials: select material → Shader → **Universal Render Pipeline/Lit**
4. For Forst trees, open and import `Conifers_URP.unitypackage` inside that pack

What is included + what else to download: [Docs/ASSETS_INCLUDED_AND_DOWNLOAD.md](#)

4) Recommended first hour in the new project

1. Create Terrain
 2. Add player capsule + `PlayerMotor` + `PlayerInteraction` + `SimpleFollowCamera`
 3. Tag player **Player**
 4. Place one house + `HouseDoor`
 5. Place one car prefab + `WheelColliders` + `CarController` + `VehicleEnterExit`
 6. Press Play and test walk / enter door / drive
-

5) Scripts included (quick list)

Script	Purpose
<code>PlayerMotor</code>	Walk / run / jump
<code>PlayerInteraction</code>	Press E to use doors/vehicles
<code>PlayerSpawnPoint</code> + <code>PlayerBootstrap</code>	Spawn player
<code>HouseDoor</code>	Enter/exit house or swing door
<code>BuildingInteriorVolume</code>	Detect inside house
<code>CarController</code>	Drive cars (<code>WheelColliders</code>)
<code>BikeController</code>	Drive bikes
<code>PlaneController</code>	Fly planes
<code>BoatController</code>	Drive boats
<code>VehicleEnterExit</code> + <code>VehicleSeat</code>	Enter/exit any vehicle
<code>ZoneTrigger</code>	Zone enter detection
<code>DayNightCycle</code>	Sun day/night
<code>AmbientZoneAudio</code>	Zone sound beds
<code>SimpleFollowCamera</code>	Temporary camera

6) After everything is copied

You may delete the old project folder.

Keep this Downloads pack as backup until your new project is saved and working.
